

## Skull Halloween Frame

### Supply List

- Frame
- Black Acrylic Paint
- Paint Brush
- Skull Buttons
- Glue

### Step 1:

Start with a cheap frame that you found at the dollar store or the clearance section of your local home goods store. Remove the glass and the back from the frame. Pour some black acrylic paint out on a paper plate or paint pallet and paint the frame with a thin coat of black paint. Allow the paint to dry and then apply a second coat. Depending upon how thin your coats are, a third coat may be needed.

### Step 2:

Once all coats of black paint are dry, get out the skull buttons and your glue. You can use any strong craft glue, but I used a hot glue gun for this project. Start in the center and work your way out to the corners. I made sure that the buttons were applied symmetrically around the frame but you could also do a more carefree application of the buttons.

### Step 3:

Cut some cardstock down to size and use some spooky letter stickers to create a message for the inside of the frame. Insert the glass, paper, and back again and you are ready to decorate with it.
