

## Jute Wrapped Wreath

### Supply List

- Styrofoam Wreath Form
- Jute Cord
- Glue (Tacky Glue or Hot Glue)

I make a lot of wreaths and a simple jute-wrapped wreath is the base of a lot of them. I want to show you just how easy it is to make beautiful wreaths at home that are customized to coordinate with your décor.

### Step 1:

Choose a front and a back of your wreath form. Starting in the back, place a dot of glue and glue down the beginning of your jute cord. Slowly wrap the cord around the Styrofoam form, making sure to keep each new wrap nice and close to the last one to cover the form completely. Place a line of glue on the back side a couple inches long at a time to keep the jute attached to the back of the form permanently.

### Step 2:

Continue wrapping the jute around the form until the entire form is covered. You will have to pass the ball of jute through the center of the form to keep it from getting tangled.

### Step 3:

When you come to the end of your form, cut the end of the jute off of the ball and glue it to the back with enough glue to keep that tail nice and secure.

### Step 4:

Allow the glue to dry the whole way and then you are free to decorate this wreath with [artificial flowers](#), handmade silk flowers, bells, ornaments, ribbons, and so much more.
